

**Table 1.** Comparison between protocols and publications on criteria for including participants in intent to treat (ITT) analysis<sup>1</sup> by study number.

Criteria for including participants in ITT analysis	Study Number													
	945–209		945–291		945–210		945–224		945–271		945–276		945–411	
	Protocol	Publication	Research report <sup>1</sup>	Publication	Protocol	Publication	Protocol	Publication	Protocol	Publication	Research report <sup>1</sup>	Publication	Protocol	Publication
Did not mention this type of analysis							X							
Type of analysis mentioned but no details on criteria were reported			X						X					
All patients randomized to treatment	X	X	X		X	X	X			X				X
Completed treatment at minimum dose and/or for a minimum duration		X	X		X	X	X			X	X	X	X	X
Data available for baseline level of outcome variable							X						X	X
Data available after randomization for a specified or unspecified number of visits/days			X			X					X			
Completed minimum duration of follow-up after randomization and/or in baseline period	X													

<sup>1</sup>We used internal company research reports for two trials (945–291 and 945–276) where the protocol was not available.
